1 Length (Distance)

✓ Kilometres (km) to Metres (m)

- 1 kilometre = 1000 metres
- ➤ To convert, multiply by 1000

◆ Example:

$$2 \text{ km} = 2 \times 1000 = 2000 \text{ m}$$

■ Word Problem:

Ravi walks 3 km to school. How many metres does he walk?

Solution: $3 \times 1000 = 3000 \text{ m}$

✓ Metres (m) to Centimetres (cm)

- 1 metre = 100 centimetres
- ➤ To convert, multiply by 100

◆ Example:

$$5 \text{ m} = 5 \times 100 = 500 \text{ cm}$$

■ Word Problem:

A ribbon is 6 m long. How many centimetres long is it?

Solution: $6 \times 100 = 600 \text{ cm}$

2 Mass (Weight)

✓ Kilograms (kg) to Grams (g)

- 1 kilogram = 1000 grams
- ➤ To convert, multiply by 1000

◆ Example:

$$4 \text{ kg} = 4 \times 1000 = 4000 \text{ g}$$

■ Word Problem:

A watermelon weighs 2 kg. What is its weight in grams?

Solution: $2 \times 1000 = 2000 \text{ g}$

✓ Grams (g) to Kilograms (kg)

- 1000 grams = 1 kilogram
- ➤ To convert, divide by 1000

◆ Example:

$$5000 \text{ g} = 5000 \div 1000 = 5 \text{ kg}$$

■ Word Problem:

A sack of rice weighs 6000 g. What is its weight in kilograms?

Solution: $6000 \div 1000 = 6 \text{ kg}$

✓ 3. Capacity (Liquid)

◆ Litres (L) to Millilitres (mL)

- 1 litre = 1000 millilitres
- ➤ To convert: Multiply by 1000

📊 Example:

$$2 \text{ L} = 2 \times 1000 = 2000 \text{ mL}$$

■ Word Problem:

A bottle holds 3 litres of juice. How much juice is that in millilitres?

👉 Solution: $3 \times 1000 = 3000 \text{ mL}$

🧠 Tips to Remember

Conversion	Rule
1 km = 1000 m	Multiply by 1000
1 m = 100 cm	Multiply by 100
1 kg = 1000 g	Multiply by 1000
1000 g = 1 kg	Divide by 1000
1 L = 1000 mL	Multiply by 1000
