

trams are the kind of land transport which actually Travel On Rails they were before used in India but now they are not used anymore

then we have Tractors actually used in farms

ambulances are found in hospital and used when people are having emergency medical situation

the difference between airplane and helicopter is that airplane needs a track from which it can lift off and then can come down itself also but then we have helicopters they just need a helipad.

the first land transport that we had was a cart which was made out of wheels

the first air transport that we had was actually a hot air balloon
