

AIR, WATER AND ROCK

By Sanskriti

www.vaagaacademy.com

WHAT IS AIR?

- Air is all around us.
- We **cannot see** air, but we **can feel** it.
- Air gives life to humans, animals, and plants.

WHAT IS AIR?

-  Air has weight
-  Air occupies space
-  Air is needed for burning
-  Air helps things fly (e.g., kite, airplane)
-  *Olympiad Tip:* Air **pushes and lifts** objects to help them fly.

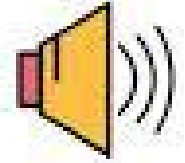

Properties of Air

Air has oxygen for life

Air can dissolve in water

Air can carry sound

Air takes up space

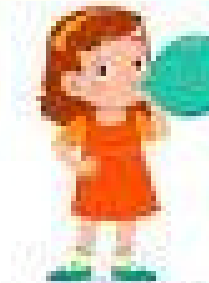

Air has weight

Air can flow

orchidsinternationalschool.com

Uses of Air

Blowing a Balloon

Flying a Kite

Filling the Ball

Air is needed to Breathe

Movement of Aeroplane

Burning of Fire

AIR POLLUTION

- Air becomes dirty due to smoke, dust, and harmful gases.

- This is called **Air Pollution**.

Things that can reduce air pollution:

- ✓ Using cycles or walking
- ✓ Planting trees
- ✓ Using less plastic

✗ *Burning garbage adds to pollution!*

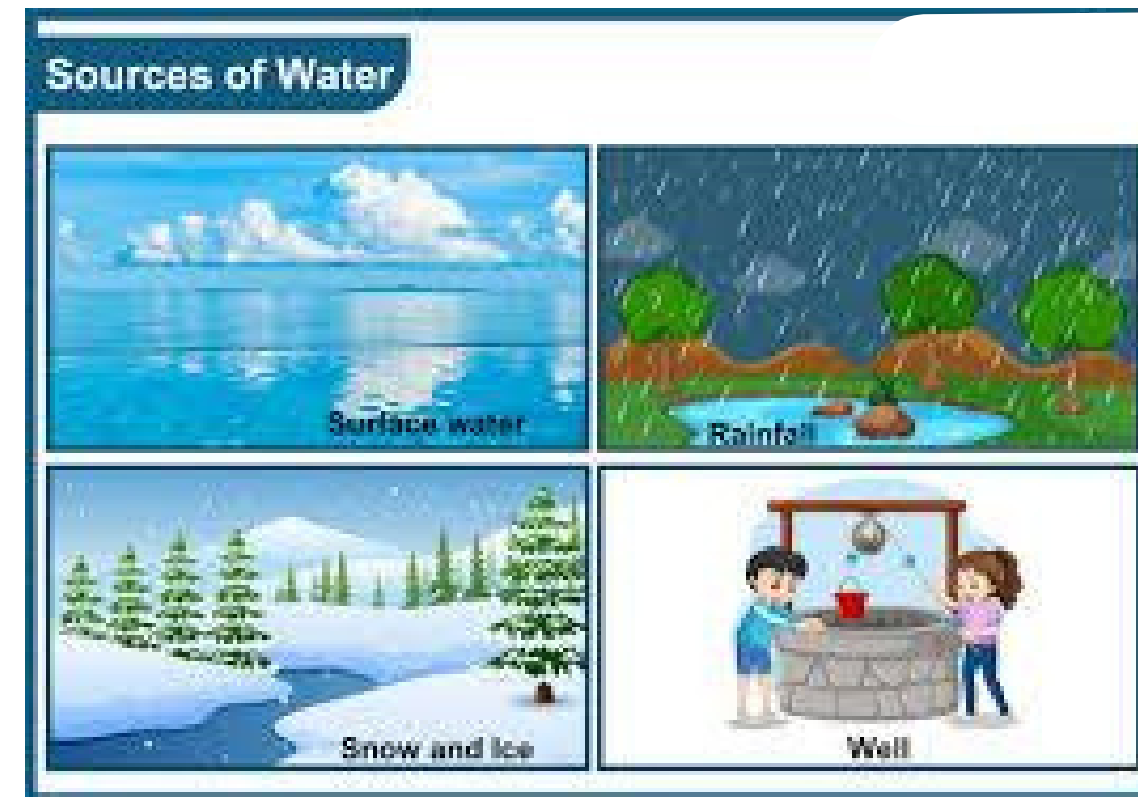

PROTECTION FROM AIR POLLUTION

- Wear a mask 🧐
- Stay indoors on polluted days
- Use air purifiers

WHAT IS WATER?

- Water is a **natural resource**.
- We need it to **drink, bathe, cook, and grow plants**.
- Comes from **rivers, lakes, rain, wells, and seas**.

CLEAN/DIRTY WATER

- Drinking **clean water** keeps us healthy.
- Clean water should be:
 - ✓ Boiled
 - ✓ Filtered
 - ✗ Don't drink water from dirty ponds or taps without cleaning!

WATER USES

We use water for:

- 🚿 Bathing
- 🧺 Washing
- 🌱 Watering plants
- 🍳 Cooking

Save water by:

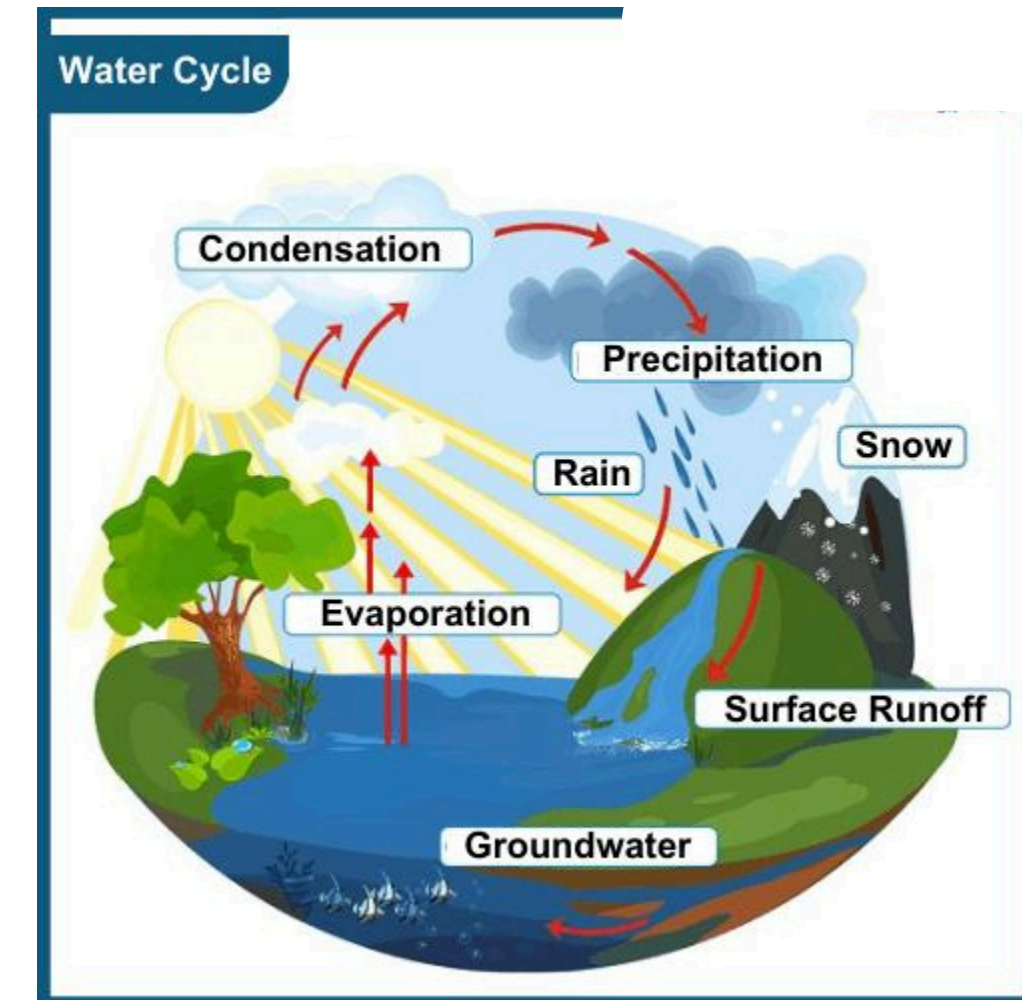

- Turning off taps
- Reusing clean water (e.g., from washing fruits)

🧠 *Olympiad Tip:* Abby reuses water from fruit washing to water plants = Water Saver!

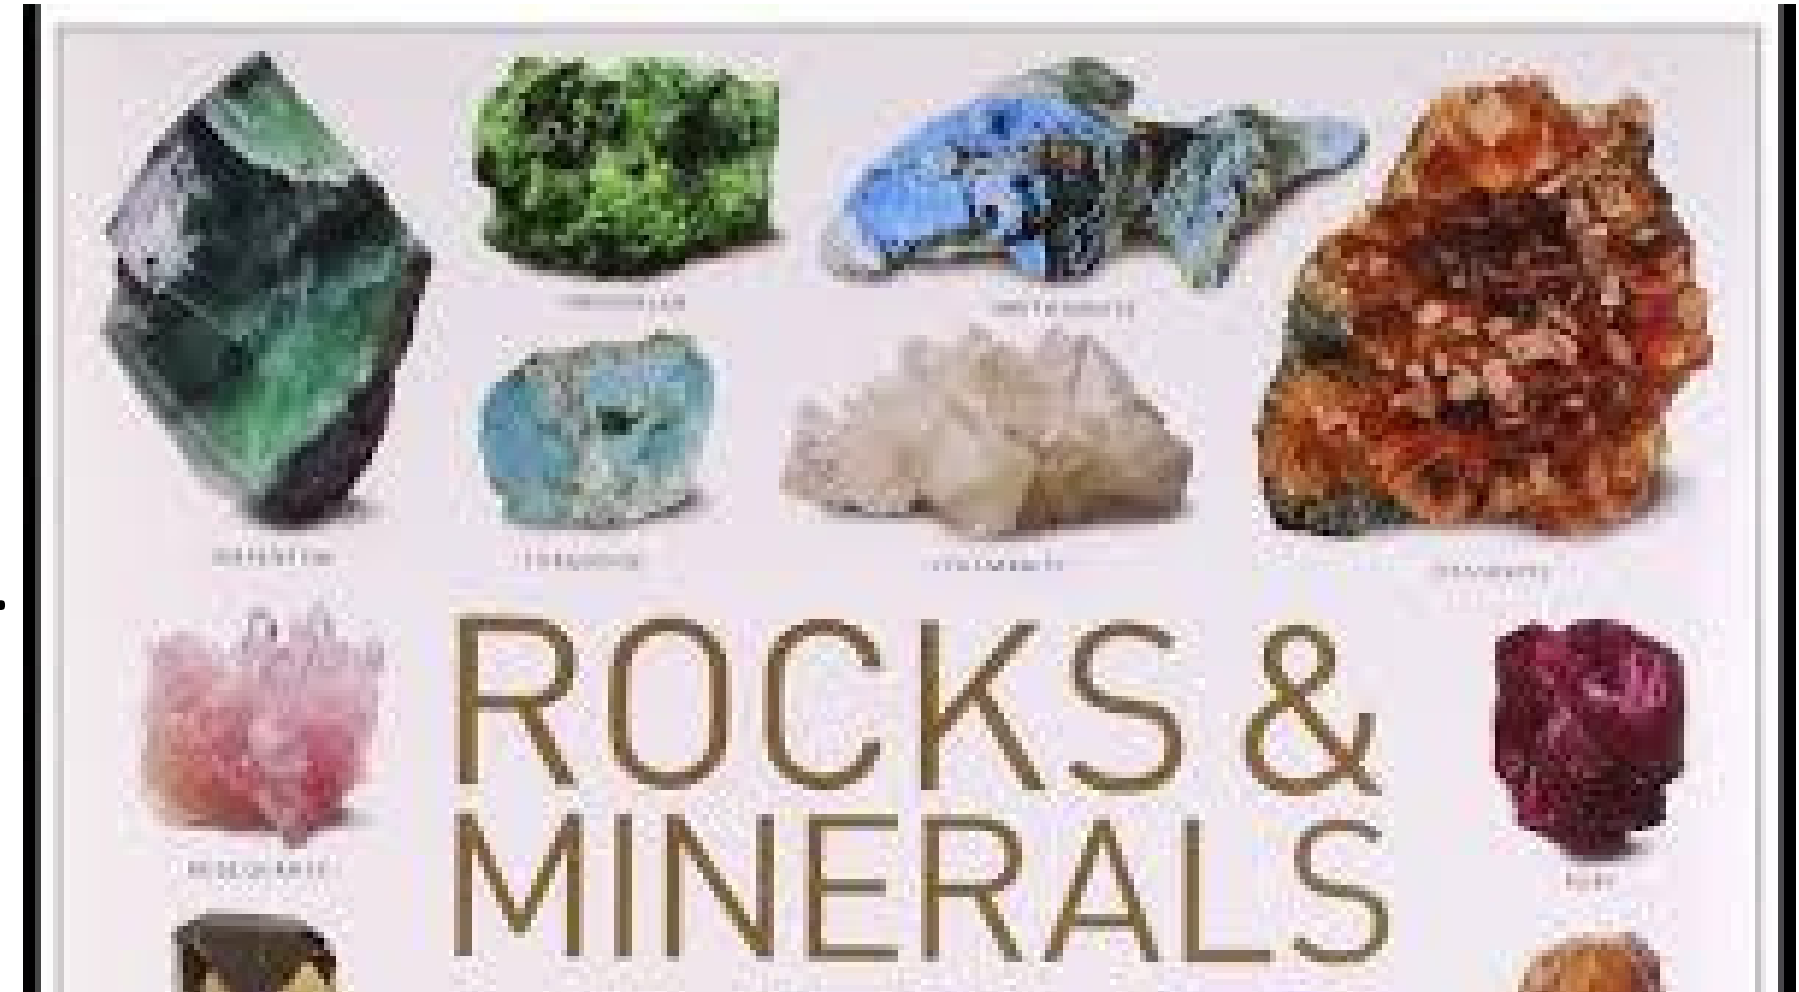

WATER CYCLE

1. 🌞 **Evaporation** – Water becomes steam
 2. ☁️ **Condensation** – Steam becomes clouds
 3. 🌧️ **Precipitation** – Clouds give rain
- 🧠 *Olympiad Word:* Precipitation = Rain falling from clouds

ROCKS AND MINERALS

- Rocks are **hard, natural things** found on Earth.
- **Minerals** are found **inside** rocks.
- Rocks are used to make **buildings, roads, statues**.

TYPES OF ROCKS

-  **Igneous Rocks** – Formed from lava (e.g., Granite)
-  **Sedimentary Rocks** – Formed from layers of sand (e.g., Sandstone)
-  **Metamorphic Rocks** – Formed from heat & pressure (e.g., Marble)

 *Olympiad Trick:*

- Igneous = Lava
- Sedimentary = Sand layers
- Metamorphic = Changed by heat & pressure

Igneous Rocks

Granite

Scoria

Obsidian

Pumice

Sedimentary Rocks

Sandstone

Limestone

Shale

Gypsum

Conglomerate

Metamorphic Rocks

Marble

Slate

Quartzite

Gneiss

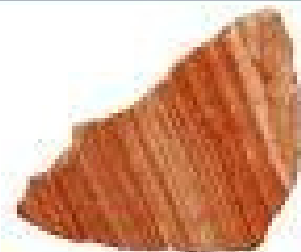

USES OF ROCKS AND MINERALS

-  Diamond – Jewelry
-  Silica – Used to make glass
-  Talc – Used in powder
-  Coal – Used for fuel

Hard Rocks

Granite

Sandstone

Marble

Soft Rocks

Coal

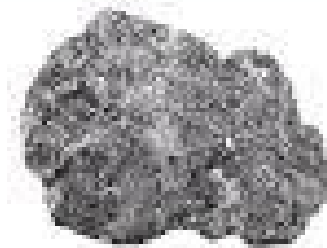

Slate

Minerals

Diamond

Graphite

Quartz

Silica
