

Plants

By Sanskriti

What are Plants?

- Plants are **living things** that grow in soil and need:
 - **Air**
 - **Water**
 - **Sunlight**
- They **make their own food** using sunlight. (This process is called **photosynthesis** – bonus word!)
- 🧠 *Fun Fact:* Plants are called **producers** in nature because they make food for animals and humans!

Types of plants

- **Trees** – Tall and strong (e.g., Mango, Neem)
- **Shrubs** – Short and bushy (e.g., Rose, Hibiscus)
- **Herbs** – Small and soft-stemmed (e.g., Basil, Mint)
- **Climbers** – Need support to grow (e.g., Grapevine, Money Plant)
- **Creepers** – Grow along the ground (e.g., Pumpkin, Watermelon)

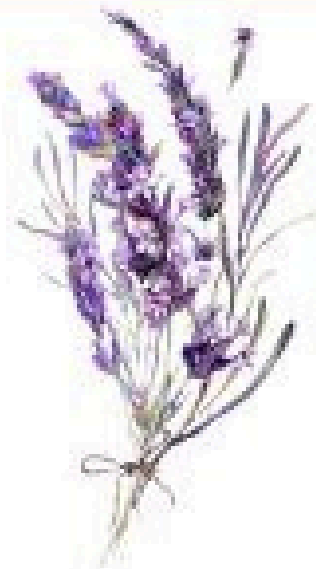

herbs

Basil

Rosemary

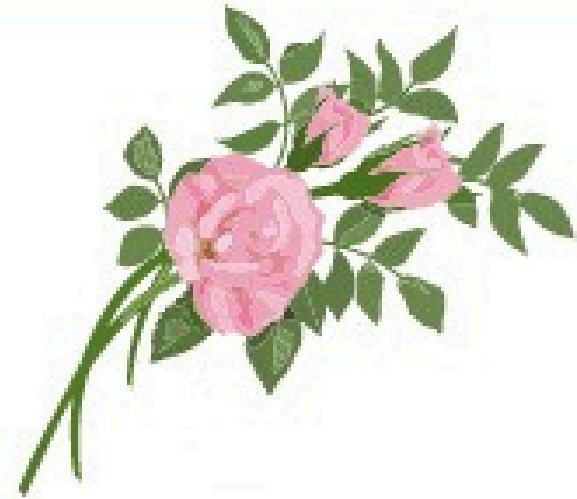

Lavender

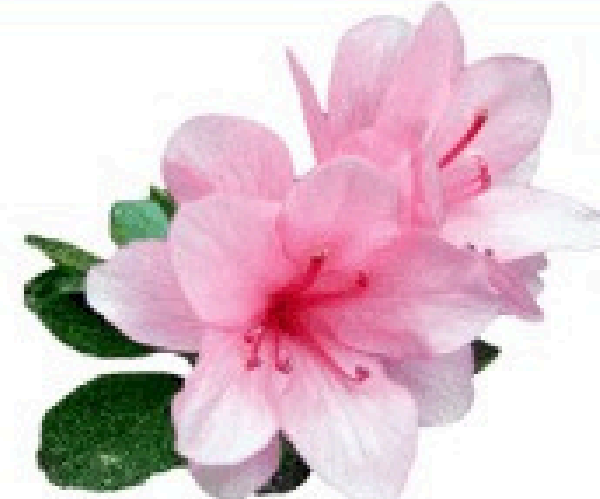

Oregano

shrubs

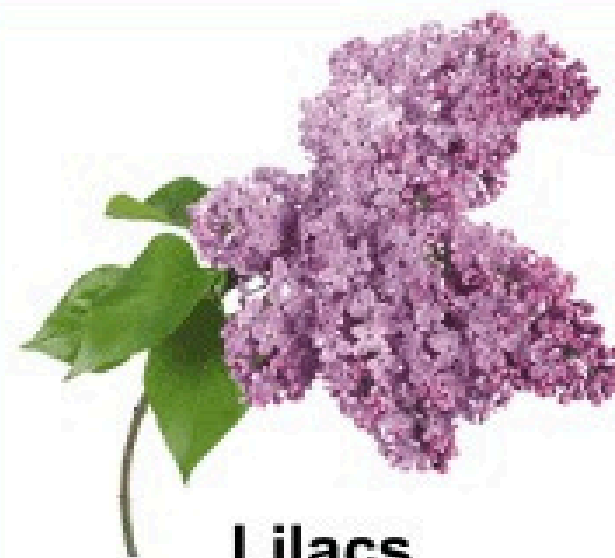

Roses

Azaleas

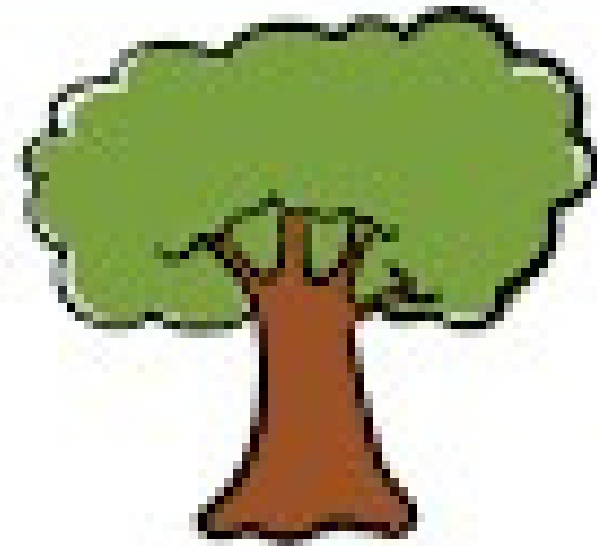

Hydrangeas

Lilacs

trees

Oak

Maple

Pine

Palm

climbers

Pea Plant

Grapevine

Money Plant

creepers

Watermelon

Periwinkle

Sweet Potato

Pumpkin

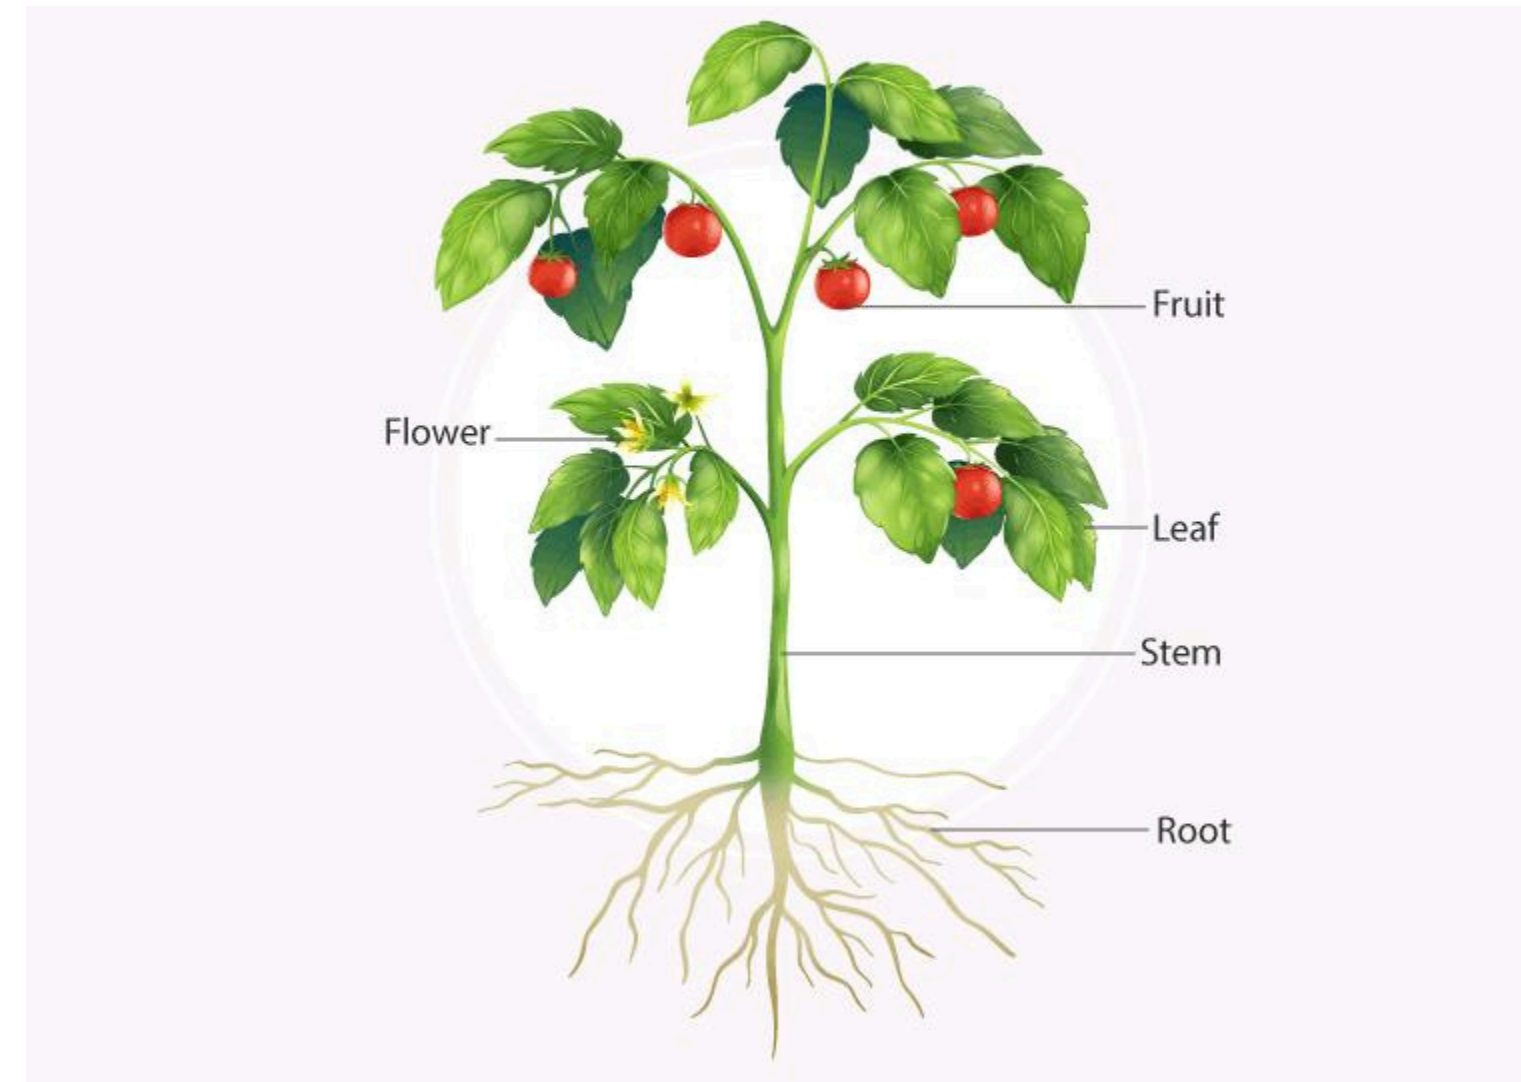

Aquatic Plants

- These plants live **in water**.
- Examples: **Lotus, Water Lily, Hydrilla**
- ☀ Olympiad Tip: Lotus and Water Lily are in the **same group** – *aquatic plants*.

Parts of plants

- **Root** – Takes in water and minerals from soil
- **Stem** – Helps the plant stand and carries water
- **Leaves** – Make food (green and flat)
- **Flowers** – Help in reproduction and make seeds
- **Fruits** – Grow from flowers and have seeds inside

Special plant parts- tendrils

- **Tendrils** are thin and flexible.
- They **wrap around** objects to **help plants climb**.
- Found in **climbers** like pea plant and grapevine.

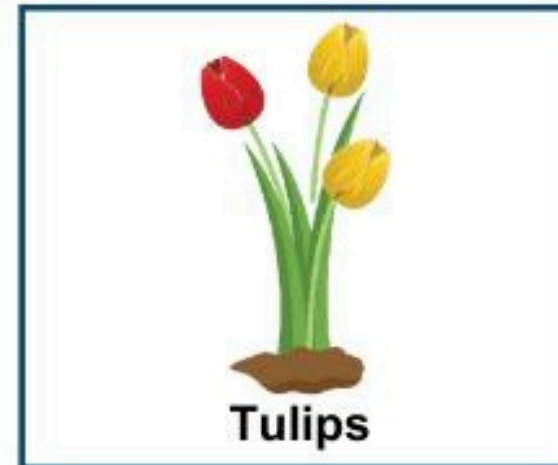

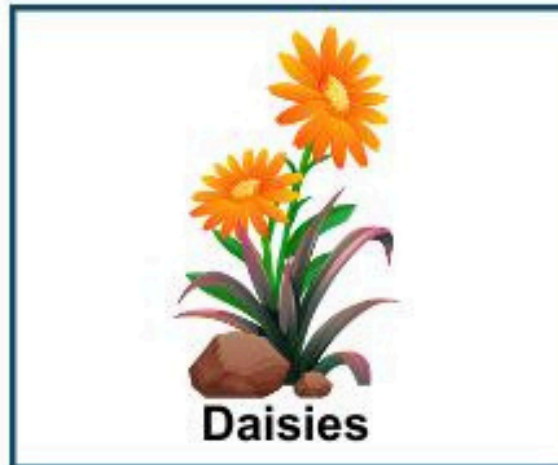

Flower/Non-Flowering?

- **Flowering Plants:** Rose, Lily, Tulip 🌸

- **Non-Flowering Plants:** Fern, Moss 🌿

🎯 Olympiad Trick: If it doesn't make a flower, it's a non-flowering plant!

flowering plants

non flowering plants

Ferns

Mosses

Pine

Algae

Lifespan of Plants?

- **Herbs** – Short life (1-2 years)
 - **Trees** – Live for many years (some over 100!)
 - **Creepers and Climbers** – Medium life (seasonal or few years)
-  *Question Example:* How long does a basil plant live? → Around 1 year

THANKS
